

608 trycket ökar

609 A trycket är dubbelt så stort eftersom höjden är dubbla.

$$610 \quad p = \rho g h = 1000 \cdot 10 \cdot 100 = 1 \text{ MPa}$$

$$611 \quad p = \rho g h \quad p = \frac{F}{A}, \quad \cancel{A}$$

$$F = \rho g h \cdot A = \quad F = p \cdot A$$
$$= 1000 \cdot 10 \cdot 11030 \cdot 10^{-4} \approx 11 \text{ kN}$$

$$612 \quad p = \rho g h \quad \rho = 1000 \text{ kg/m}^3$$
$$g = 1.62 \text{ kg m/s}^2$$
$$h = 0.2 \text{ m}$$

$$p = 1000 \cdot 1.62 \cdot 0.2$$

$$p = 324 \text{ Pa}$$

$$613 \quad 700 \text{ kg} = 7000 \text{ N}$$

$$\frac{7000}{500} = 14 \text{ ggr starkare}$$

$$\text{Max tryck } p = 250 \text{ kPa} \quad p = \frac{F}{A}, \quad A = \frac{F}{p}$$

$$\cancel{A} \quad A = \frac{500 \text{ N}}{250 \cdot 10^3 \text{ Pa}} = 2 \cdot 10^{-3} = 20 \text{ cm}^2$$

$$r = \sqrt{20/\pi} \approx \underline{2.6 \text{ cm}} \quad 2.6 \cdot \sqrt{14} = 2.6 \cdot 3.7 = \underline{9.6}$$
